

Lab: Build a HTML table

1. Copy your registration page to a new file called salesData.html
2. Edit this new file in a text editor.
3. Keep the header (logo, links, etc) and footer (copyright) areas but remove the middle parts -- the guts of the page.
4. Add a heading reading "Sales data"
5. Add an HTML table with fake sales data. Provide four rows; the data for four fake salespeople. Make up some names. The 3 columns will be their sales for the last three full months. Let's make their sales in the cells be numbers between 0.00 and 100,000.
6. Provide totals for each salesperson in another column to the right.
7. Provide totals for each month in another row across the bottom.
